SEDOL	B8J4K42
Aegon mnemonic	CCP
CitiCode	G1WU

*This includes a standard 1% product charge, a fixed management fee and expenses that vary with the day to day costs of running the fund. You may pay a different product charge.

About fund performance

Investors should always consider performance in relation to the objective of the fund and over periods of at least five years. If a fund has risen in value, it doesn't mean it is meeting its objective – especially if the fund is aiming to outperform a particular benchmark or meet a risk target. The same applies if the fund has fallen in value.

Our risk rating

Below-average risk

Below average risk funds will generally see some change in day-to-day value, both positive and negative, and these changes will typically be larger than those of a cash deposit. They may hold a broad range of investment types, including equities (shares), but a significant proportion may also be invested in investments that aim to provide a reliable source of income (like government and corporate bonds) and, with that, greater stability than would typically be available from equities. They try to provide better long-term growth prospects than a cash deposit, but are lower risk than funds investing largely in equities.

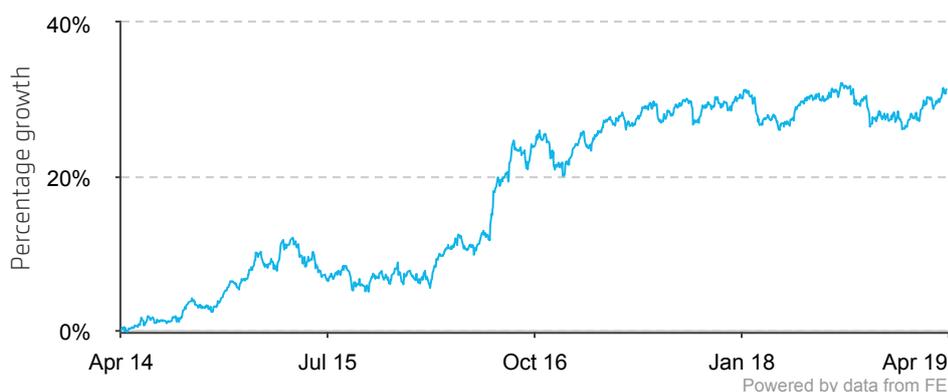

Fund objective

This portfolio aims to provide long-term capital growth while keeping risk in a target volatility range of 6-8% over a market cycle, which the fund manager defines as being three years or more. We've engaged Morningstar to help us select and manage the blend of funds it contains. The portfolio is built mainly using a collection of low-cost funds that aim to perform in line with their regional benchmarks, by investing in the same companies as them, in the same proportions. The Cautious Core Portfolio invests mainly in less risky assets like cash, government bonds (gilts), corporate bonds and property. It will also invest to a lesser extent (around 30%) in riskier equities (shares in companies). This is the second least risky of the Core Risk Profile Portfolios, so it may not return as much as other funds in the range over the longer term.

Fund performance

The following graph and tables show the performance of the fund over various time periods compared to the fund's benchmark (if there is one). All performance information is as at 31 Mar 2019 unless otherwise stated.

In the graph, performance is shown since launch if the fund is less than five years old.

■ Cautious Core Portfolio

	1yr	3yrs	5yrs	10yrs
Fund	3.5%	5.8%	5.6%	-
	Mar 18 to Mar 19	Mar 17 to Mar 18	Mar 16 to Mar 17	Mar 15 to Mar 16
Fund	3.5%	-0.3%	14.9%	0.2%
				Mar 14 to Mar 15
Fund				10.7%

Source: FE. The performance information has been calculated in pounds on a bid-to-bid basis and is net of charges with gross income reinvested. Performance for periods over a year is annualised (% per year). Past performance is not a guide to future performance. The value of an investment can fall as well as rise and is not guaranteed. Investors could get back less than they originally invested.

Fund manager information

This fund is an Aegon Solution. This means it is a pre-built fund Aegon have created to offer whole investment strategies in a single fund with the aim of making investing easier. We reserve the right to add, remove and replace the underlying funds within this solution with the aim of making sure the fund continues to meet its aims and objectives. Sometimes we work with external fund managers and they select and manage the underlying funds on our behalf. The additional charges/expenses may change when underlying funds are replaced, added or removed from the portfolio or when weightings between the underlying funds are changed. Please note, there's no guarantee the fund will meet its objective.

Cautious Core Portfolio

Risks specific to this fund

There is no guarantee the fund will meet its objective. The value of an investment can fall as well as rise and investors could get back less than they originally invested. All funds carry a level of risk and the information below outlines the key risks for this fund.

Currency risk - this fund invests overseas so its value will go up and down in line with changes in currency exchange rates. This could be good for the fund or bad, particularly if exchange rates are volatile.

Third party risk - in the event that the underlying investments which the fund invests in suspend trading, Aegon may defer trading and/or payment to investors. The value ultimately payable will depend on the amount Aegon receives or expects to receive from the underlying investments.

Credit risk - this fund invests in bonds or other types of debt. Bonds are essentially loans to companies, governments or local authorities so there's a risk that these companies or government bodies may default on the loan. Bonds are rated in terms of quality, usually from AAA down to B and below. AAA is the highest quality and therefore the least likely to default and B or lower the most likely to default. Where we have it we show the credit quality of the loans held by this fund.

Interest rate risk - interest rate changes could affect the value of bond investments. Where long term interest rates rise, the value of bonds is likely to fall, and vice versa.

Target risk - the fund may sit outside its risk target at times, for example if risk in the markets is unusually high or low. The risk target is long term, so the manager wouldn't increase or decrease the fund's risk just to meet its risk target in the short term.
