Risk and reward profile

- This indicator shows how much a fund may have risen and fallen in the past, and therefore how much a fund's returns may have varied. It is a measure of a fund's volatility. As the fund has less than 5 years price history, this calculation incorporates the volatility of an appropriate benchmark index. The higher a fund's past volatility the higher the number on the scale and the greater the risk that investors in that fund may have made losses as well as gains. The lowest number on the scale does not mean that a fund is risk free.
- The fund has been classed as 3 because its volatility has been measured as medium to average.
- This indicator is based on historical data and may not be a reliable indication of the future risk profile of this fund.
- The risk and reward profile shown is not guaranteed to remain the same and may shift over time.
- Liquidity/Credit Risks: The fund invests indirectly in government and corporate debt. Their value is affected by changes in interest rates and inflation as well as their credit ratings. At times of market stress, corporate debt may not be saleable in a timely manner at reasonable prices.
- Property Fund Investment Risk: Investments may be illiquid and have wide price spreads that may impact the fund's value.
- Non-UCITS Retail Scheme (NURS): The fund can be less diversified than UCITS schemes as it has higher investment limits for certain types of assets. It can also invest in assets which are not available to UCITS schemes. This can increase the potential rewards but can also increase risk.
- For full details of the fund's risks, please see the prospectus which may be obtained from the address in 'Practical Information' below.
